Team 🤖: Goals and Strengths

Here at Team 🤖, we strive for well organized and timely delivered work. Our goal as a team is to create a product that effectively meets all of our clients' needs, all presented with a clean and user-friendly interface. However, we have a secondary goal as well. While most of our previous have studies have taught us how to be a programmer, now we are presented with an opportunity to take the next step in becoming fully fledged software developers. As such, we view this project as an excellent way of putting into practice the software development processes we are learning in the course.

As a team, our greatest strengths lie with our previous experiences. Through our studies, we have all obtained working proficiency with both Java and Python, so those languages are sure to be used within our project. Likewise, we have also picked up several other skills as well, such as data manipulation and web development. Additionally, several of our team members have already done co-op terms or individual projects, where we have gotten a taste of the software development life cycle.

Individual Biographies

Chedy Sankar

I am a second year student in Software Engineering. I was born on May 14th, 1999, in Toronto, and live in Scarborough. My background however, is Guyanese, which seems to be quite uncommon in the field of computer science. I commute to school, and like to stay on campus to finish up work. I took a full course load in the summer to stay in line with my academics for when I take 4 months off for co-op. Currently, I am taking up web development and SQL for personal interests, and am taking a full course load this semester. I am bilingual, having completed french immersion in high school. I enjoy playing many sports, namely volleyball and basketball, and I have quite the competitive mindset when it comes to games or challenges in general. I am currently trying to strengthen my web development skills, as well as my vertical leaping skills. Lastly and most importantly, my favorite color is teal.

Omar Chehab

I am a third year student specializing in Software Engineering. I am 20 years old, turning 21 in March. Some people call me a workaholic, because I enjoy working in my free time. Personally, I don't consider it working because I love doing what I do. I've been working on my startup ManageUN for the past 3 years with the support of The Hub. I also freelance with a company called 247studios, where I spent the majority of my time as a web developer. Recently, I've been certified by Google as a Mobile Web Specialist, I pursued this certification to boost ManageUN's credibility. This semester, I plan on playing basketball at least twice a week at Pan Am's. I am excited to work on this project with my team and I think we are off to a great start.

Jacob McMorrow

I am a fourth year student specializing in Software Engineering, though I am also considering majoring in mathematics since I have enjoyed the majority of my math courses so far. I was born on June 24th, 1991 in Toronto and currently live in Whitby. As a co-op student, I am looking forward to my first work term next year and especially hope to find work involving mathematical computation and/or DSP (digital signal processing) applications. I am currently working on strengthening my programming skills and learning more about the software design process in general. I also enjoy working in teams and believe it is a great opportunity to learn from others. In particular, I am looking forward to the current project and to getting to know my team members better. My hobbies include reading (especially science fiction, mathematics, and philosophy), playing, composing, recording, mixing music, playing video games, and lifting weights.

Dayde Reid

I am a fourth year student in the currently working towards a specialist degree in Computer Science, in the comprehensive stream. I got into Computer Science after developing a love for programming in high school. I have lived in Ontario my whole life, but only moved to Toronto in the last couple years, so I am still getting used to the big city. As a co-op student, I have already completed two work terms, one with Parks Canada and one with Loblaws, I feel that I have gotten a good grasp on the software development process. In my spare time, you can find me playing video games with friends, listening to some music or out riding my bike, although I have also been known to work on my own projects from time to time. I am looking forward to getting to know my fellow team members as we work on this project together.

Chengron Zhang

I'm a third year student in software engineering stream. I'm from China but I finished my high school in Canada. I'm not a coop student so school work is all of my life. I'm learning some data structure and algorithm problems for personal interest. I can work everywhere for the project. I'm a midcore gamer so I always spend some time on gaming everyday, but I never missed any work that I should to do. I also do some sports. I planned to play badminton every week at pan am sports center. I'm a soccer fan too, my favorite team is Inter Milan. I'm really excited for the project and I believe we can do this.
